- Open the roof box, and align the holes in the plate with the mounting location at the forward crossbar. The plate is located at the front of the base of the roof box.
- 3. Attach the adhesive seal over the four unused mounting holes (two on each side) at the rear of the base of the box. The seal will help prevent water from entering the roof box. Remove the roof box.

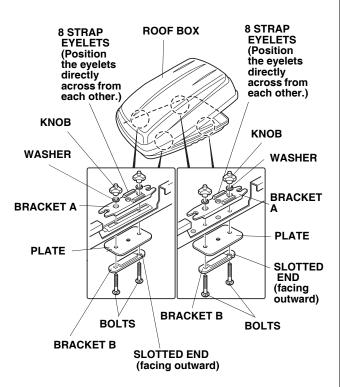

plate as required.

4. Using isopropyl alcohol on a shop towel, clean four brackets B where the small pads will attach. Remove the adhesive backings from the small pads, and attach them to the brackets B.

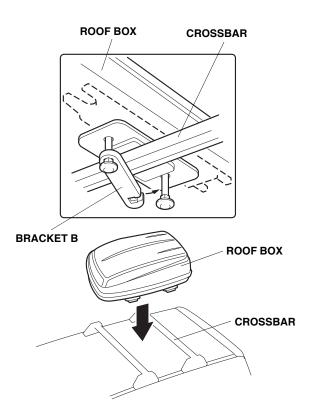

5. Using isopropyl alcohol on a shop towel, clean the four plates where the large pads will attach. Remove the adhesive backings from the large pads, and attach them to the plates.

6. Under the roof box, insert one bolt through each bracket B, through the plate, and into the predrilled hole in the bottom of the roof box.

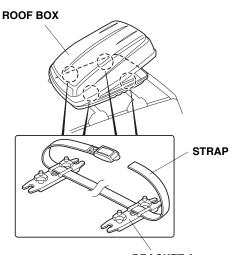

- 7. Fit one bracket A over the threads of each bolt where it extends through the roof box. Install a washer over the threads, and loosely install a knob. Install a second bolt the same way.
 - Adjust bracket A so that the right and left eyelets are positioned directly across from each other.
 - Install bracket B with the slotted end facing outward.

8. With the help of an assistant, carefully place the box on the crossbars. Be aware of the hardware hanging from the bottom of the box.

- 9. Arrange the plate to fit between the box and the crossbars. Swing the slotted end of bracket B around the bolt, and tighten the knobs. Fasten the bolts this way at all four mounting points.
 - If necessary, adjust the distance between the crossbars to match the pattern in the predrilled holes in the roof box. The minimum bar spread required is 800 mm (31 in.) for all racks.
 - The roof rack should be centered on the crossbars and parallel to the direction of travel with its flat side facing front.

10. Insert the straps through the eyelets on bracket A, and attach each strap together.

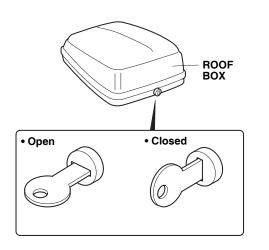

USE AND CARE

Unlocking/Locking the Roof Box

Unlocking: Insert the key into the lock, and turn it counterclockwise to unlock. Press the center button and lift the lid of the roof box.

Locking: Press down on the lid. There should be an audible click. Be sure the lid is latched by attempting to lift the lid. Turn the key clockwise to lock the roof box. Remove the key while not in use. Be sure the straps are not outside the roof box.

LOADING THE ROOF BOX

Load weight equally on both sides to minimize imbalance. Do not overload the roof box; the maximum allowable load is 110 lb (50 kg).

Loads must be secured with the straps to prevent them from sliding. Check the fasteners at regular intervals.
